

# We've got your comfort covered.

*We offer many accessories to enhance your existing heating and cooling equipment that will increase your comfort and make your home a safer place to live.*

## Programmable Thermostat

Programmable thermostats save energy and deliver precise comfort control by automatically keeping your home at the temperature you choose. Your system runs less when you're not home, but brings the temperature back to your desired level before you return. Our touch screen thermostats have large numbers and easy-to-read displays.

## Ceiling Saver Leak Protection

Reduce your fears of ceiling damage from an overflowing air handler or furnace. The EZ Trap inline overflow switch protects you from condensate overflow by cutting off your system before damage can be done.

## AquaGuard Float Switch

Water damage due to condensation overflow can be a costly event. An AquaGuard float switch installed on your drain pan detects condensate overflow, and shuts off your system, protecting your structures and providing you with peace of mind.

## Air Purification System

Installed as part of your home's heating and cooling system, the Lennox PureAir™ system cleans the air by pulling it from every room, filtering it, and sending clean air back to your home. Air cleaners also trap airborne contaminants down to .3 micron, including allergy causing pollen and mold spores, chemicals and pet dander. They also keep dust and dirt from reaching your heating and cooling equipment, allowing it to perform at peak efficiency.

## High Efficiency Filtration

Remove 95% of particles ranging in size down to .3 microns including dust, bacteria, tobacco smoke, pollen and pet dander. The Lennox MERV 16 pleated air filter removes contaminants that standard filtration simply cannot stop.

## Honeywell Steam Humidifier

Heating your home dries out the air, causing you to feel colder and turn up the heat, using more energy. Proper humidity is also the key to staying healthy in the winter. Keeping your sinuses and airways moist helps reduce the potential for bacteria and viruses to enter your body. Whole home humidifiers help you achieve the proper humidity levels, eliminate irritations and annoyances of excessively dry air, and provide maximum comfort throughout your entire home.

# Protect Your Home and Your Family's Health.

## Fresh Air Ventilation System

When a home is well sealed, it is very energy efficient, but a new problem arises – it becomes like a plastic bag. What is inside stays inside, including pollutants that we DON'T want. To solve this problem, the home needs to be ventilated. An Aprilaire Ventilation System provides a quiet, energy efficient way to exchange stale and sometimes toxic indoor air for fresh, outside air throughout your entire home.

## Duct Smoke Detector

The System Sensor Duct Smoke Detector is the latest innovation for early detection of smoke and products of combustion present in air moving through HVAC ducts. Add this inexpensive life saving tool to every furnace and help protect your most valuable asset, your family.

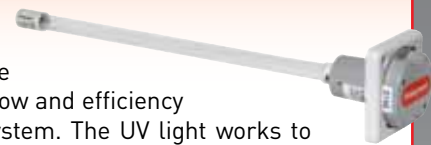

## Carbon Monoxide Detector

Carbon monoxide (CO) can be a silent killer in the home. You may have a CO detector, but all CO detectors have a limited life to protect you, and yours may have stopped working. This new carbon monoxide detector lets you know there's a problem before reaching dangerous, even deadly CO levels, long before the other detectors even begin to work. Ask us for more information on this low-level Carbon Monoxide Monitor.

## UV Light Coil Protection

Protect your air conditioning coil from mold odors, airborne bacteria and decreased air flow and efficiency with a UV light protection system. The UV light works to protect harmful contaminants from getting into the airstream, providing clean, healthy air for your family for years to come.

## Whole House Dehumidifier

High humidity is a perfect environment for all sorts of pathogens leading to a variety of ailments including asthma, allergies and a variety of respiratory infections. A central dehumidifier works with your central air conditioner to provide complete humidity control while maintaining an optimum home temperature. Lower humidity will also make you feel comfortable at higher temperatures, thus reducing your energy consumption.

## Attic Tent

The Ultimate Attic Access Cover. Your pull-down staircase is a point of air transfer / loss. This durable insulated cover creates an airtight barrier that fits standard folding attic stair sizes. It is a practical and economical solution to a problem that has existed since homes were built with overhead attic entries. That problem is wasted energy through and around the attic door and stairs.
